Earth is the third planet from the Sun, and the only astronomical object known to harbor life. According to radiometric dating and other sources of evidence, Earth formed over 4.5 billion years ago. Earth's gravity interacts with other objects in space, especially the Sun and the Moon, Earth's only natural satellite. Earth orbits around the Sun in 365.26 days, a period known as an Earth year.

Methane (US: / ˈ m ɛ θ eɪ n / or UK: / ˈ m iː θ eɪ n /) is a chemical compound with the chemical formula CH<sub>4</sub> (one atom of carbon and four atoms of hydrogen). It is a group-14 hydride and the simplest alkane, and is the main constituent of natural gas. The relative abundance of methane on Earth makes it an attractive fuel, although capturing and storing it poses challenges due to its ...

The categories listed below are those that will be used at the Intel ISEF 2019. Local, regional, state and country fairs may or may not choose to use these new categories, dependent on the needs of their area. Please check with your affiliated fair(s) for the appropriate category listings at that level of competition.

1.. Introduction Methane (CH<sub>4</sub>) is the most abundant organic trace gas in the atmosphere. Concentrations of CH<sub>4</sub> have more than doubled since pre-industrial times, with a current globally-averaged mixing ratio of ~1750 ppbv (NOAA CMDL data, Dlugokencky, personal communication). The effects of CH<sub>4</sub> on climate and atmospheric chemistry are the reason for concern over its high growth rate.
