Chapter 15 (Water and Aqueous Systems) Test Study Guide The bonds between the hydrogen and oxygen atoms in a water molecule are polar covalent bonds. The covalent bonds are polar because the oxygen atom has a greater electronegativity than the hydrogen atoms. The bonds between adjacent water molecules are called hydrogen bonds.

The Water Molecule: a Review Water is a simple tri-atomic molecule,  $H_2O$  Each O-H bond is highly polar, because of the high electronegativity of the oxygen (N, O, F, and Cl have high values) bond angle of water =  $105^\circ$  due to the bent shape, the O-H bond polarities do not cancel. This means: water is a polar molecule.
