In psychology, a set is a group of expectations that shape experience by making people especially

sensitive to specific kinds of information. A perceptual set, also called perceptual expectancy, is a predisposition to perceive things in a certain way. Perceptual sets occur in all the different senses. They can be long term, such as a special sensitivity to hearing one's own name in a crowded ...

Classical and operant conditioning are two important concepts central to behavioral psychology. While both result in learning, the processes are quite different. To understand how each of these behavior modification techniques can be used, it is also essential to understand how classical conditioning and operant conditioning differ from one another.
