We allow students to re-schedule once to another class once within a year of the original session at no charge, except for increase in tuition, if applicable.

Colorado Firecamp - wildland firefighter training

A pawl is a mechanical component that engages with another component to prevent movement in one direction, or prevent movement altogether. It is a type of latch. It consists of a spring-loaded solid part that is pivoted at one end and engages the other component at a steep angle at the other end. Pawls are often tapered, being wide at the pivoting end and narrow at the engaging end.

Pawl - Wikipedia

Welcome to the the online home of St Louis Public Schools Fire & EMS Academy at Gateway STEM High School. Lecture portions of classes are now listed on the website and available for students 24/7. Students are responsible for completing the online portions of the class according to the class schedule.

St Louis Public Schools Fire & EMS at Gateway STEM ...

An optical beam smoke detector is a device that uses a projected beam of light to detect smoke across large areas, typically as an indicator of fire. They are used to detect fires in buildings where standard point smoke detectors would either be uneconomical or restricted for use by the height of the building. Optical beam smoke detectors are often installed in warehouses as a cost effective ...
