The Stefan-Boltzmann constant (also Stefan's constant), a physical constant denoted by the Greek letter σ (sigma), is the constant of proportionality in the Stefan-Boltzmann law: "the total intensity radiated over all wavelengths increases as the temperature increases", of a black body which is proportional to the fourth power of the thermodynamic temperature.

Newton's laws of motion are three physical laws that, together, laid the foundation for classical mechanics. They describe the relationship between a body and the forces acting upon it, and its motion in response to those forces. More precisely, the first law defines the force qualitatively, the second law offers a quantitative measure of the force, and the third asserts that a single isolated ...

La prensa hidráulica es un mecanismo conformado por vasos comunicantes impulsados por pistones de diferentes áreas que, mediante una pequeña fuerza sobre el pistón de menor área, permite obtener una fuerza mayor en el pistón de mayor área. Los pistones son llamados pistones de agua, ya que son hidráulicos. Estos hacen funcionar conjuntamente a las prensas hidráulicas por medio de motores.

En punktladning, dvs. en ladning uden udstrækning, vil påvirke andre ladede partikler med en kraft, og den vil således have et elektrisk felt jf. ovenstående formel. For en positiv ladning q peger feltet væk fra ladning lige meget i alle retninger, mens det for $-q$ vil pege ind mod ladning. Der er altså tale om symmetri, hvilket især er nyttigt i Gauss' lov:

Una magnitud física se expresa como el producto de un valor numérico y una unidad de medida, no únicamente un solo número. La cantidad no depende de la unidad (por ejemplo, para la distancia, 1 km es lo mismo que 1000 m), aunque el número depende de la unidad. [3] Por tanto, en el mismo ejemplo de la distancia, la cantidad no depende de la longitud de los vectores base del sistema de

En física, un escalar (del latín: Force) es una magnitud física que puede describirse completamente por un solo número real. Los escalares, a diferencia de los vectores, no tienen dirección. ...

Assim, o estado de equilíbrio realmente assumido por um sistema termodinâmico é, satisfeitas as restrições físicas impostas, o estado de maior entropia possível, e a remoção de uma restrição leva geralmente a um aumento da entropia do sistema composto, ou, em caso específicos (transformações reversíveis), à manutenção de seu valor, mas nunca a uma diminuição da mesma.

Física re-Creativa - S. Gil y E. Rodríguez 3 Según el teorema de los ejes paralelos1 (teorema de Steiner), el momento de inercia respecto de su centro de masa, I_{cm} , y el momento de inercia respecto de un nuevo eje paralelo al primero y separado de aquel por una distancia y (ver Figuras 1 y 2), están relacionados por:

Në fizikë, koncepti i Forcës përdoret për të shpjeguar çdo ndikim, i cili shkakton nxitimin (përshpejtimin) e një trupi të lirë. Forca gjithashtu mund të përshkruhet me anë të koncepteve intuitive si shtytja ose tërheqja të cilat shkaktojnë që një objekt me masë të ndryshojë shpejtësinë e tij (kjo përfshin rastin kur trupi fillon të lëvizë nga një gjëndje ...

La tribologia è la scienza che studia l'attrito, la lubrificazione e l'usura, ovvero tutti i problemi che possono presentarsi nel moto relativo tra superfici interagenti sottoposte a carico. La parola tribologia deriva dal greco ed è composta da tribos (in greco Τρίβος), che significa attrito e logos (in greco λόγος), che significa studio o scienza, quindi letteralmente "la scienza ...
